Abstract

This document describes deliverable D5.4, the final UCN Demonstrator.
1 UCN DEMONSTRATOR

As D 5.4, the UCN Demonstrator is of the type ‘Prototype’, this current document is not the actual deliverable. It is primarily created for formal reasons to document that 5.4 has been achieved and delivered on time.

The UCN Demonstrator consists of the PIH Implementation (described in Deliverable 1.3) and the four demonstration showcases that have been built around the PIH and are described in Deliverable 5.3.

The four demonstrators have been shown in an early version in the second year review and have been extended in the final year in the aspects documented in D5.3. They will be shown at the final project review.

Where applicable, their source code has been made available. The links to the corresponding software repositories are listed in Deliverable 6.5.
